

ABSTRACT:

This electronic equipment comprises a housing which is formed by two housing parts of which one (15) is integral with a retractable screen (10) which may take up a first position called closed position and a second position called open position which permits to see the whole screen. In the closed position one part of the screen remains visible and the other part of the screen is hidden in a second part of the housing (5). This second housing part supports other elements of the equipment, for example, microphone (2), keyboard (1) etc.

Application: mobile telephones that can be used with the Internet (WAP).
